CI	9	5+
every published project runs automated tests in CI	published projects, from database to interface	years in controllership, tax and payroll/HR

PROFILE

For more than 5 years I worked in payroll, tax and, more recently, controllership routines. At an accounting firm, I handled payroll and tax routines for its client companies. I saw up close where operations break: disconnected spreadsheets, hand-made reconciliations and deadlines that depend on someone's memory.

Instead of just pointing out those problems, I started solving them with code. Today I build systems for a business group's operations, replacing manual controls with automation, integrated data and alerts; Fuel Mind is already in real use for the group's fuel purchasing. And I speak both languages: finance's and engineering's.

EXPERIENCE

Feb 2026 – present
9 months

Grupo Zen
Junior Financial Systems Analyst

- Built Fuel Mind, in real use for the group's fuel purchasing, and AlertSignal, for tracking permit and license expiry dates.
- Automated the check between recorded fuel invoices and the AutoSystem tank report, previously done by hand.
- Structured operational and financial data from the group's business units to support management decisions.

Sep 2025 – Jan 2026
4 months

Fazenda Novo México
Administrative Assistant

- Managed administrative operations for a large-scale irrigation project under tight deadlines.
- Coordinated internal teams and liaised with contractors across several fronts at once.

Feb 2021 – Sep 2025
4 years and 7 months

Astcon Assessoria Contábil
Office Assistant — Payroll & HR

- End-to-end payroll and HR routines for the firm's client companies: hiring, terminations, vacations, severance, social security (INSS, FGTS) and government filings (eSocial, DCTFWeb).
- Analytical rigor with large volumes of tax and labor data.
- Go-to technical reference on the team, responsible for training new hires.

PROJECTS

AUTOMATION & DATA · ● IN REAL USE

Fuel Mind

PROBLEM — The group's fuel purchasing and freight were tracked in disconnected spreadsheets, and checking the NF-e invoices against the AutoSystem tank report was done by hand.

SOLUTION — NF-e XML import, a day-by-day check against the AutoSystem tank report, price alerts, freight by plate, driver, company and vehicle set, an analytics dashboard and month-end closing in PDF and Excel.

ARCHITECTURE — Vanilla JavaScript with no build step, on Firebase (Firestore, Auth, Hosting). Multi-company with roles enforced by Firestore rules, changes kept in the browser when the connection drops, Chart.js, jsPDF and SheetJS. Automated tests in CI (GitHub Actions).

RESULT — **NF-e → month-end** each invoice is entered once, and cost, freight and month-end closing all come from it. In real use by me, for now with a single user.

JavaScript · Firebase · Firestore · Chart.js · jsPDF · SheetJS — controle-entradas-posto.web.app

PROCUREMENT & APPROVALS · ● LIVE DEMO

Praxis

PROBLEM — Without a system, purchasing runs on email and spreadsheets: quotes that are hard to compare, approvals with no record and payment instalments nobody tracks.

SOLUTION — A kanban for the purchasing flow, side-by-side quotes with a savings indicator, approvals with structured rejection reasons, instalment payments with receipts and an SLA timeline that highlights the slowest stage.

ARCHITECTURE JavaScript ES modules with no build step, on Firebase: Firestore, Auth with Custom Claims, Cloud Functions (Node 22) and Storage. Company isolation through security rules, 6 roles, transactions against status conflicts, and a PWA.

RESULT **End-to-end** from request to payment, with a history of every approval and 14 notification events.

JavaScript · Firebase · Cloud Functions · Firestore Rules · PWA praxis-af618.web.app

AI & FULL-STACK REACT · FASTAPI

FlowTrack

PROBLEM Categorizing expenses by hand is the tedious part of personal finance, and calling an AI for every transaction is slow and expensive.

SOLUTION Imports PDF statements from 4 banks, plus OFX and CSV. Categorizes in 3 layers: fixed rules, a merchant cache and, only as a last resort, Claude Haiku. Includes budgets with alerts, goals, a 30-day balance projection, an audit log with undo and offline mode.

ARCHITECTURE React 19 + TypeScript on the front end; FastAPI (Python) on the back end; Supabase Postgres with Row Level Security and JWT auth. Async worker with exponential retry, Sentry, CI on GitHub Actions (tests, Playwright e2e, Lighthouse) and decisions recorded in ADRs.

RESULT **3 layers** fixed rules and a merchant cache before the AI: Claude Haiku only handles what the first two can't.

React · TypeScript · FastAPI · Supabase · Claude Haiku · Playwright flowtrack-afn.vercel.app

BACKEND & AUTOMATION PYTHON · FLASK

AlertSignal

PROBLEM Permit and license expiry dates were tracked in a hand-maintained spreadsheet, with a real risk of fines every time a deadline slipped.

SOLUTION A web app that monitors expiry dates and emails notices at 90, 30 and 7 days, plus a daily reminder once a document has expired, with several owners per document, full history, configurable rules and Excel export with color-coded status.

ARCHITECTURE Python + Flask + SQLite with plain SQL, scheduled jobs with APScheduler, email via smtplib, Jinja2 templates and pandas/openpyxl reports. Admin and viewer roles, and automated tests in CI.

RESULT **90 · 30 · 7** days ahead: automatic alerts instead of manual tracking.

Python · Flask · SQLite · APScheduler · pandas

More on GitHub

Docke — Multi-company document management: OCR, tax obligations by tax regime, legal retention and a hash-chained audit trail. (React · TypeScript · FastAPI · PostgreSQL (RLS) · Tesseract)

UnifyData — Monthly payroll-benefits reconciliation: matches AutoSystem exports against HR records and outputs one Excel file per unit. Web and Python versions, with fuzzy name matching. (JavaScript · PDF.js · ExcelJS · Python · Streamlit · pandas)

AudiStock — Physical stock audits with camera barcode scanning, several auditors counting at once in real time, and an offline queue. (JavaScript · Supabase Realtime · IndexedDB · jsPDF)

DeepChat — Browser chat where DeepSeek answers and ChatGPT reviews the answer (or the other way round). API keys stay in the browser. (HTML · CSS · JavaScript · AI APIs)

ArtMaker — Promotional flyer generator (1080×1920) for retail stores, in a single HTML file with Canvas. (JavaScript · HTML5 Canvas)

SKILLS

Technologies: Automated tests · CI (GitHub Actions) · Authentication & roles · PDF / Excel reports · JavaScript · Python · Dashboards & KPIs · PostgreSQL / Supabase · Scheduled jobs · Real-time & offline · TypeScript · React · FastAPI · Firebase · pandas · Flask + SQLite · Generative AI (Claude) · OCR (Tesseract) · NF-e e-invoices (XML) · Git · SQL (basic) · Power BI (basic) · Advanced Excel · Vite · Streamlit · Playwright · Sentry

Business: Tax routines · Financial & operational data analysis · Payroll & HR compliance (eSocial, DCTFWeb, FGTS, INSS) · Team training · Controllership & reconciliation · Internal controls · ERP (AutoSystem) · Team & contractor coordination · Project administration

EDUCATION

Technologist Degree in Systems Analysis and Development

Uniasselvi · Completed in 2026
